Radmehr Vafadar

Computer Science (Honours), Cybersecurity | Queen's University
+1 437-433-3140 radmehrvafadar@gmail.com linkedin.com/in/radmehrv github.com/RadmehrVafadar

Skills

Languages: Python, Java, C, C++, Go, JavaScript/TypeScript, SQL, Bash
Frameworks & Tools: NestJS, React, Flask, Git, Docker, GitHub Actions, Terraform
Platforms & Databases: Linux, PostgreSQL, Apache Kafka, Auth0, GCP, Kubernetes
Concepts: Data Structures & Algorithms, Distributed Systems, IAM, RBAC, API Authorization

Education

Queen's University *Kingston, ON*
Bachelor of Computer Science (Honours), Cybersecurity *Aug. 2023 – Expected May. 2028*
Relevant Coursework: Operating Systems, Database Management Systems, Data Structures and Algorithms, Computer Architecture, Software Architecture, Artificial Intelligence, Computer Networks

Experience

Software Engineer Intern *Remote, Canada*
Empire Life *May. 2026 – Present | 12-month internship*
- Reduced typical account-support resolution time from 1–3 hours to 10–30 minutes by developing an impersonation feature that enabled multi-platform customer-account troubleshooting serving 600,000+ users.
- Implement backups to across 6 roles for 600,000+ users, integrating role data into Google Cloud Storage.
- Wrote 30+ automated tests for identity-management workflows and configured a GitHub Actions YAML pipeline to validate changes on every pull request increasing monorepo testcoverage from 40% to 80%.
- Contributed features and bug fixes on a 4-person IAM team supporting Auth0-backed internal and customer platforms handling **3,335**+ annual identity and access requests with **96% SLA** compliance.
- Implemented least-privilege RBAC in Auth0 for an internal identity administration platform, enforcing granular roles and permissions across UI and API layers.

Teaching Assistant *Kingston, ON*
Stephen J. R. Smith Faculty of Engineering and Applied Science *Sept. 2025 – Apr. 2026*
- Supported two courses with a combined enrollment of **760+ students**.
- Enhanced software quality by designing and deploying an AI-powered testing strategy on GitHub Actions, which automatically generated exhaustive test suites to increase coverage by 40% and reduce bugs.

Projects

rad.ar | *TypeScript, NestJS, PostgreSQL, GraphQL, Docker, MCP* *July 2026 – Present*
- Extended a modular NestJS job aggregation platform spanning 160+ job boards, ATS platforms, and company career sites through a shared scraper interface and normalized REST, CLI, and MCP outputs.
- Built a PostgreSQL-backed internship watcher that deduplicates cross-source listings, persists source observations and baselines, and sends one notification per canonical posting.
- Built a concurrent scheduler with PostgreSQL leases and atomic checks, preventing duplicate runs across replicas.

Distributed Video Streaming | *Python, Apache Kafka, OpenCV, Flask, Docker* *Aug. 2025 – Sept. 2025*
- Built an event-driven video pipeline that encoded webcam and file frames with OpenCV, published JPEG byte payloads through Apache Kafka, and streamed consumed frames to browsers through a multipart Flask endpoint.
- Containerized Kafka and ZooKeeper with Docker Compose and separated frame producers, consumers, and the web-serving layer into independent services, creating a reproducible environment for end-to-end development and stream testing.

Leadership

Computing Students' Association *Queen's University*
COMPSA - Director of Merchandise *May. 2024 – May. 2026*
- Led a seven-person merchandise team overseeing more than **$4,000** in inventory.
- Helped organize a Google Toronto office visit for 50+ Queen's students by coordinating financial and organizational support from Queen's University and COMPSA.
